Capilix has received the 2010 European Water Quality Sensors Technology Innovation Award from Frost & Sullivan at a gala dinner in London at 1 December 2010.

The award is a great motivator for the team of Capilix to continue the development of lab-on-a-chip technology for industrial applications.

Jury report:

Frost & Sullivan Award underlines Capilix's Excellence in Technology Innovation. "The Capilix microchip capillary electrophoresis technology promises to reduce the number or variety of sensors applied for measurements," notes Frost & Sullivan Research Analyst Igor Derylo. "It also offers the prospect of significantly reducing the time needed to get a test outcome by bringing the laboratory to the sample, rather than bringing the sample to the laboratory."
